iGO4 Sustainability Policy – Creating a better future

Our Plan

iGO4 wants to play its part in fighting climate change and building a sustainable future for everyone.
Through innovation, targeted action and environmental best practice we aim to be a business that looks after the long-term best interests of our staff, partners and customers. Together we can bring about the change needed.

Our Commitment

iGO4 are committed to setting a science-based target through the Science Based Targets initiative (SBTi). It means we will set meaningful targets in line with a 1.5°C emissions scenario where we are aiming to achieve net zero emissions by 2050 at the latest in alignment with the goals of the Paris Agreement.

Our Aims

Responsible energy use

We are committed to reducing the impact that we as a business have on our surroundings. One of the key ways that we aim to do this is via our energy consumption, we aim to:

- Reduce our energy consumption
- Use 100% renewable energy
- Measure and reduce our indirect greenhouse gas emissions

Reduce the waste we produce

One of the ways that we can reduce our environmental impact is to reduce waste and promote a digital-first approach, which we aim to do with all of our products. We also:

- Reduce waste, promote re-use and maximise recycling
- Reduce paper use and promote digital channels to deliver service to customers

Create innovative products

One of our main sustainability principles is to ensure that we provide innovative, forward-thinking insurance products that help forge the way for the rest of the market. One of the ways we're doing this is by:

- Supporting the transition to electric vehicles with new insurance products that make switching to electric vehicles even more simple

Our business and employees

We believe that it's our role to set a good example for our employees, encouraging and helping them to make greener choices both in their professional and personal lives. We aim to:

- Encourage staff to adopt green technologies, providing workplace charging facilities
- Use hybrid working patterns to minimise commuting
- Encourage staff to use green travel options wherever possible

All with a collective goal of working with our suppliers to achieve net zero operations by 2050.

Monitoring Progress

We will continually measure our direct and indirect emissions and publish our progress publicly against our targets at least annually.
